ANGULAR DEVELOPER

Location:	Westminster, London with occasional flexibility if required
Role:	Full time, Monday to Friday
Timing:	Hiring ASAP and we will close when we find the right candidate
Salary:	Competitive - commensurate with experience

ABOUT POLICY IN PRACTICE

Policy in Practice is an award-winning socially focused software and analytics company.

We are experiencing rapidly growing demand for our services and we are hiring an **Angular Developer with 1-3 years professional experience** to work alongside our growing team. The role offers the opportunity to have a high degree of influence over our product development, working closely with senior developers and analysts within the existing team.

Government policy is complicated, confusing and ever changing. This makes the welfare system difficult to understand, to communicate and administer. We simplify the welfare system for individuals and organisations. We help people understand how government policy affects them so that they can make decisions.

Our tech engine models how the policies of four government departments affect thousands of families on low incomes. We use a scientific approach to data visualisation to drill down to individual households, track the effectiveness of support and help people to take control.

We have so far supported over 75 local authorities, housing associations and work and health organisations to improve the future for many people across the country. We are able to track the living standards of over one million households, 1 in 8 of everyone using the welfare system, via anonymised data sets.

Our mission is to reduce poverty which we do through our to key software products:
- Benefit and Budgeting Calculator, is award winning and visited 10,000 times a day. It provides personal budgeting support and helps people to grow their financial resilience without the need to be an expert in the welfare system
- Low Income Family Tracker Dashboard, which helps councils target resources more accurately, spend money more effectively and meet their statutory obligations

ABOUT THE ROLE

Policy in Practice is hiring an **Angular Developer**

The role will help build the technology on which our analytics and insights are built. Working for a senior full stack developer, you will develop our tools, as well as inform and contribute to the architecture and future vision of our technology stack.

Your work at Policy in Practice will mean you will be at the forefront of technology in the government space. We are creating new approaches to the formation and implementation of policy by putting the person first, using data. To support this vision will require all of your energy, abilities and ambition. You will be keen to develop your skills across the full-stack and excited to learn new technologies. This will be a challenging role; you will be hands-on, unafraid of getting stuck in and focused on great results.

You must be proficient in:

- Angular
- JavaScript
- TypeScript

These are also useful:

- TDD / BDD, using Mocha, Jasmine, Protractor
- Node.js
- Koa
- HTML5, CSS and Sass
- MySQL / PostgreSQL
- Git version management (we use GitLab at present)
- AWS hosting and server management
- OOP coding practices and architecture
- Agile development approaches, CI/CD, kanban and sprints

Your day to day activities will encompass anything and everything that's required to build great tech: architecture, engineering, a customer focus, and of course, heads-down coding.

You will bring 1-3 years experience, perhaps in a start-up, tech firm or consultancy. And you will definitely bring a thirst for learning, a love for technology and a deep desire to solve real problems in our society.

The position is offered as a full time permanent contract.

HOW TO APPLY

Please send your CV with a short covering letter or video that clearly outlines your qualifications, suitability and interest in the post to admin@policyinpractice.co.uk
